Message Author

Mr. Poole
Python

Here's some power:

Message users who message in something to your server!

In on_message, you can add

```python
@client.event
async def on_message(message):
    await message.author.send("You're awesome!")
```

This sends the author of a message, a personal message.

Lab - Message Author

1. Anytime a user messages that they're sad, message them a gif of something happy!!!
